Bingus Network

Official Whitepaper

Bingus

Table of contents

Bingus Network aims to save as many animals as possible. A percentage of every Bingus Network transaction is donated to animal shelters and charities.

Meet Bingus

Bingus is a hairless sphynx cat that took the internet by storm with his adorable cuteness. He captured the imagination of many and quickly became a meme.

Bingus, the cryptocurrency project, was launched as an animal charity/meme token on the Binance Smart Chain (BSC). Bingus provides a cryptocurrency investment that benefits animals with each transaction.

Now, the term Bingus has taken on multiple meanings. It is still, of course, the pictured cat, but it is also any cat — all cats are just hairy Binguses after all. We also use Bingus to mean the token itself and, of course, a collective for the wider project. Bingus is an idea, that animal lovers around the world can hold a meaningful investment that benefits animal charities and shelters who will accept cryptocurrency into their lives.

Since March 2021, Bingus — the project — has evolved with the help of a friendly and dynamic community. Bingus truly has a global network, with followers from all corners of the world. We are all united by two things: our love of animals, and our love of crypto.

Bingus is our mascot. Bingus stands for animal welfare.

We are Bingus. #BingusSaves

Meet Floppa

At the time Bingus became a meme, there was another cat on the block. A big cat indeed.. Meet Big Floppa, a fearsome caracal.

Legend has it that Floppa and Bingus were once the best of friends since the dawn of time. No one knows when the war started, but start it did and Big Floppa became Bingus' mortal enemy.

"To become a big cat, you have to eat a lot!" such was the caption that launched Floppa's career. Floppa's favourite food is paperhands; when Floppa gets hungry he doubles the transaction fees FOR SELLS.

A brief history of Bingus

The first Bingus contract was made simply as a meme token deployed by a hobbyist programmer. Despite quickly gaining a small following, it emerged that there was a fatal flaw in the contract — new tokens could be minted at will.

Having the ability to mint tokens in a contract (without an advanced way of controlling it) is incredibly dangerous for a token's longevity, as it means the contract creator can generate new tokens out of thin air and render everyones' holdings worthless. When this mint function was discovered, even though never used nor intended, the investment was too unsafe and so all holders were advised to sell.

A few of the earliest investors in Bingus 1.0 held on to their holdings of Bingus token so that others could exit and recoup all or some of their initial investment. These same individuals decided they wanted to start again, and so they launched Bingus 2.0.

" We believe it's time to harness the power of crypto to help voiceless animals who cannot take care of themselves."

Bingus 2.0 grew and grew, at its peak reaching a $24 Million dollar market cap. Bingus caught the attention of online influencers and celebrities alike who saw the potential of the project. As time went on and the project matured and as more people joined the team and community, it became clear that much more could be done to help animals globally.

The concept and future aims of Bingus have changed to the point where the current contract can no longer meet our expanding goals. Therefore, Bingus had to migrate to a new contract. This decision was not taken lightly. There were many positives for migration despite the additional effort and confusion it may have caused amongst the many thousands of holders. These reasons are detailed within this whitepaper.

Bingus has an interesting history. With the launch of Bingus Network, this is the third formal token launch in 2021 — each a necessary contract migration of the previous.

Bingus has achieved some really amazing things so far in its existence. Let us first recap what was achieved since the launch of Bingus 2.0.

"As time went on, the project matured. As more people joined the team and community, it became clear that much more could be done to help animals globally."

Accomplishments to date

Date	Accomplishment
March 31	Website launch
April 2	Relaunch with Community Funds Liquidity locked on Pancakeswap v1 for 1 year
April 5	First donation to animal shelter
April 8	First >$1k donation
April 11	First >$3k donation
April 12	Audit with DessertSwap
April 12 & 29	Feature Soundcloud track from bbno$
April 23	First >$10k single event donation
April 27	Coinmarketcap listing
April 28	Coingecko listing
May 3	Full listing on Apeswap.com DEX
May 3	Apeswap.finance - Staking Pool Stake GNANA to earn BINGUS
May 4	Takodefi.com - Partnership BNB-BINGUS Ape LP Farm
May 6	Blowfish Lottery - Billion Bingus Giveaway
May 10	Takodefi.com - New farm TAKO-BINGUS Ape LP Farm
May 11	Dogira - Partnership
May 12	Neural Pepe Charity Auction
May 16	Rocky Kanaka - Feature Youtube Video
May 16	$20k raised by Dogira on Bingus behalf Assigned to shelter & rescue donations
May 17	Complete website redesign With assistance from BogTools Team
May 19	Centralized exchange listing on HotBit
May 22	Takodefi.com - Bingus Bermuda Staking Pool

Continues on the next page

Bingus

May 25	Full listing on Snowgecoin.com DEX
May 27	Centralized exchange listing on Probit
May 27	Custom staking platform developed by Lat_0x
May 29	Merch Store Launched with Bingus Official
June 3	First 2.5bn staking airdrop milestone
June 3	NFT auction with Dogira on Rarible
June 4	Bingus $1k giveaway competition to promote NFTs
June 5	6 days of giveaways for NFT promotion
June 8	Announcement regarding decision to migrate contracts
June 10	Beginning of regular game night sessions with community
June 12	The dev team decide to test novel tokenomics features
June 15	Olympus was formulated as an official Bingus side
June 20	Final announcements made for preparations of v3
June 21	The new name Bingus Network was announced
June 24	Apeswap pull their liquidity in preparation for snapshot
June 27	Olympus launches and the tokenomics prove successful
June 28	Final airdrop to stakers. Just under 10bn in total rewards
July 2	New contract developer Lat_0x is officially onboarded
July 14	Snapshot taken of Bingus v2 and liquidity drained
Ongoing	**Money raised for shelter and rescue donations (80k+ to date) with more ready to donate**
August	**After many meetings and consultations with talented solidity developers, Bingus Network relaunched onto a sophisticated and unique smart contract with lots of flexibility for project longeivity and effectiveness.**

The future of Bingus

Bingus, to date, has been an exciting experience. Bingus 2.0 saw an all time high peak of $24 million market cap. However, the infamous month of FUD, May 2021, detracted from some of our more major events and accomplishments. During this gradual decline in interest for small-cap crypto currencies, we suffered a bleed in price, highlighting prominent issues within our existing smart contract around liquidity and for raising capital for charity and marketing potential. On a brighter note, however, it also resulted in an exceptionally strong community rising up to support the cause.

In the doldrums of crypto summer, the core Bingus team took decisive action and redesigned the future of Bingus. The ultimate conclusion was simply that our existing contract could no longer carry us where we wanted to go.

Bingus 2.0 migrated to a new smart contract in August 2021. To better capture what Bingus now stands for, we have formally rebranded to the "Bingus Network". We feel that this new title captures our core values whilst also representing our utility offering — though we still happily claim the labelling of just "Bingus".

- "Bingus" keeps our origins and meme stance alive. We also have put considerable effort into having Bingus be synonymous with animal charity, with lots of success.
- "Network" draws attention to our global community as well as the utility platform that is under development for any animal shelter/rescue.

To better capture what Bingus stands for, we have formally rebranded to the "Bingus Network".

Why did Bingus relaunch with a new contract?

This is a curated list of reasons why we believe relaunching Bingus was a good idea.

Locked liquidity in PcsV1

Bingus 2.0's liquidity was locked using DXsale into Pancakeswap v1 for a year. Pancakeswap cannot move the liquidity to v2 on our behalf, and neither can we. DXsale also has no migration feature. This means that Bingus 2.0 is stuck with liquidity in v1 for a year.

As we all regularly observed, many people purchased Bingus 2.0 through the PCS v2 interface, where there is a grand total of 0.643 BNB liquidity (at time of writing). Ultimately, purchases through v2 completely ruin the investor through terrible and unavoidable slippage, and there is very little we can do about this as we would need more community liquidity to be spread across Apeswap and Pancakeswap v2, further splitting our liquidity. This is not to mention that CMC, CG and TW all track prices using PCSv2.

BINGUS - BNB LP PancakeSwap V2
One LP is worth $3,597.753
1,715,980,453.375 BINGUS + 4.834 BNB

Liquidity Pool Totals
Pool adds $478.566 to total liquidity
BINGUS pooled: 228,256,467.959
BNB pooled: 0.643
Total LP Tokens: 0.133

Use V2 Exchange

PancakeSwap V1 is no longer supported.

Go to the V2 Exchange instead for better prices on most pairs.

Go to V2 Exchange

I understand that V1 is no longer supported, and I may experience significant slippage, resulting in lost capital.

Continue to V1 Anyway

To add to this, the new investor must navigate through a scary-looking warning before buying through their trusted Pancakeswap DEX. This likely puts off many new investors who do not fully understand the nuances of Pancakeswap as a whole, adding further barriers to entry for newer investors (largely our target audience).

Relaunching Bingus enabled us to consolidate our liquidity to a single location, whereby we can have complete control over it in our new tokenomics strategy. We can also harness the latest in DeFi utility developments from projects such as Olympus lockers.

Unsuited tokenomics of Bingus 2.0

Bingus 2.0 has 3% taxes, considerably lower than most tokens on BSC making it easier to swing Bingus 2.0, especially for early whales. Whilst we are not against freedom to trade, our lack of inbuilt auto-liquidity or ability to raise charity funds without selling the token at potentially inopportune moments meant that maintaining the price was always difficult.

Bingus 2.0 tax tokenomics were fixed:
- 1% donation to charity wallet
- 1% reflected to all holders
- 1% burned

Whilst these tokenomics were ok, we relied too heavily on community fundraising for marketing purposes, and had to manually sell the charity wallet to raise capital, even during a downtrend. Both these actions punished attentive investors and the token price as a whole. The net result of these tokenomics was a significant dependency on early investors to fund marketing for new investors. This ultimately resulted in a reduced ability to generate new capital for campaigns since May, the same time we realised we needed a new contract.

The Bingus 2.0 smart contract is very simplistic and cannot be changed.
For the future of Bingus moving towards a utility based token for animal shelters, we need greater functionality and utility for the token. This functionality should serve both the investor and our charities.

Over July and August 2021, we have discussed how we might adapt to have animal shelter utility on Bingus 2.0, and the overwhelming realisation was either (i) we needed a new token to accompany Bingus 2.0, or (ii) a full project relaunch was needed.

We had intended this decision to wait until later in the year, however, the weak market conditions and lack of flexibility have resulted in bringing these plans forward. Of late, we have tested various ideas on different contracts to see which features work and which do not. Bingus officially joined forces with Bogged Finance and Gabecoin to launch the Olympus Token that had aggressive and revolutionary tokenomics. One of which was a test case for Bingus Network. Since the reasonable success of Olympus tokenomics, we are now adapting this contract to our needs with more bespoke features surrounding staking rewards and charity fundraising. We never desired the same tokenomics for Bingus Network, favouring a lower tax rate.
Success stories

Aaron from The Real Bark, Los Angeles

"We're a fully volunteer run organization in Los Angeles and rely entirely on donations to do our work, so what bingus has done for us is seriously HUGE.

We take on some pretty serious project cases that often get overlooked because of the time and medical costs involved, so receiving funding like this allows us to rescue even more animals."

"Our current major project is this wee guy named Captain [pictured]. He was reported to us after suffering severe injuries and abuse from his previous owner using him as a punching bag. His front left leg will likely go and he has a lot of rehab ahead of him. We are @therealbark on Instagram if anyone wants to watch the progress - he's already in a much better place!

Thanks to all of you though, his little face will be happy soon!"

Details about donations and any stories from Twitter @bingus_network

Bingus

Bingus Network

Tokenomics

$BINGUS - Tokenomics

Total Supply: 100 million
Total Tax: 8%*

3% staking rewards as BUSD
3% controlled auto-liquidity as BNB and BINGUS
1% for marketing and development in BUSD
1% to charity in BUSD

Key Features:
- Flexible smart-taxation means we can modify the individual taxes depending on the needs of the project. The maximum tax programmable is 15% total. We strive for less.
- Tax free wallet-to-wallet transactions. Pay tax only on buys and sells.
- Controlled auto-liquidity means we can remove it should it become too large. Removed liquidity would be used in monthly manual burn events.
- Liquidity provider staking opportunities depending on the needs of the project.
- Solo staking opportunities for investors to assist charities in earning a passive income.
- Taxes converted to BUSD at point-of-sale, no extra sales pressure in order to raise capital.

Beware of Floppa. When Floppa is enraged, he doubles the sales tax. To help fight floppa, Bingus halves the buy tax to encourage new Binguses to join the plight.

*As Bingus Network has flexible smart-taxation, 8% is only representative of the launch tokenomics. We have a higher auto-liquidity and staking rewards to start with as we require more liquidity at launch. We are aiming for a total taxation of 6%.

Bingus

Tokenomics Breakdown

Distribution:

With the launch of Bingus Network, we have offered holders of Bingus 2.0 the opportunity to claim the new token based on their previous holdings. Therefore, we have the distribution available to those holders, we additionally reserve some $BINGUS for any disputes.

Of the 100,000,000 BINGUS supply:

74,043,708	74.0 %	is made available for Bingus 2.0 holders to claim..
20,707,403	20.7 %	is held in reserve for any disputes
3,140,000	3.1 %	is paired with the BNB removed at snapshot in Apeswap Liquidity
2,108,889	2.1%	is held by the project for promotions, competitions, CEX/DEX listings etc.

Unclaimed allocation or unused disputes shall be returned to the project. The use of which shall be decided by the community (burn, staking, CEX, DEX etc.)

Summary:

Bingus Network's tokenomics allows selected charities to be paid passively in BUSD for periods of time, based on the volume of the token being traded; the first of its kind on BSC.

BINGUS has fees for auto-liquidity, marketing, development and of course, charity. We also offer intelligent staking based upon the current needs of the project and our liquidity status.

All of these fees are completely flexible. This means we can change the % of each individual element as the community sees fit, though we desire to keep taxes as low as possible. For safety, the maximum total tax obtainable from these taxes is 15%.

Reduction in supply:

We have elected to change the supply to only 100,000,000 (100 million) from 1,000,000,000,000 (1 trillion) for a few reasons, though mainly for practicality purposes. Whilst it is nice to own over a billion of something, the large number of zeros does not translate well into real world usage without having to use scientific notation.

The price of the token compared to its market-cap will be far easier to visualise. For example:

$\quad$ $ $\quad$ 1,000,000 MCAP $\quad$ = $\quad$ $0.01 PER BINGUS

$\quad$ $ $\quad$ 10,000,000 MCAP $\quad$ = $\quad$ $0.10 PER BINGUS

$\quad$ $ 100,000,000 MCAP $\quad$ = $\quad$ $1.00 PER BINGUS

Bingus

Beware of Floppa

When Floppa is enraged, he doubles the sales tax. To help fight floppa, Bingus halves the buy tax to encourage new Binguses to join the plight.

Bingus Network Tokenomics Features

No Wallet-to-Wallet transaction fees

A heavily requested feature has been built into the new contract. Any transfers between wallets will no longer incur the tax. After all, you already paid the tax when you bought it in the first place.

As well as allowing our users to move their tokens around various wallets, this helps us immensely when it comes to exchanges and other decentralized apps.

In the future, this will allow us to use BINGUS as a token for things like games, NFTs and other tools. Not to mention adding your tokens to staking, liquidity and sending to friends.

Liquidity

Bingus Network has a fully controllable auto-liquidity feature built into the contract. A percentage of each transaction is sent to liquidity, this allows Bingus Network to scale with each transaction.

Liquidity can be a drawback of many tokens when it comes to price action. When it is too low, buys and sells impact the price far too much. When it is too high, the token struggles to rise. Therefore, all LP tokens generated by the auto-liquidity feature remain unlocked.

If the current liquidity percentage is too high, we will simply unpair some of the liquidity tokens generated. The BINGUS tokens pulled will accrue for monthly events.

Trust is an important element for substantial unlocked liquidity (note that launch liquidity will be locked using Olympus lockers). At Bingus Finance, we have proven time and time again that we are to be trusted and take the development of the token incredibly seriously. We are registered as an LLC in the state of New York and would face significant legal (and social) repercussions for inappropriate usage. The founder of Bingus and owner of Bingus Finance LLC, Mike Cerisano, is entirely doxxed and regarded within BSC as a man of integrity. Come speak with him and ask about him in the Telegram channel.

Staking & Passive income for charities

By far the most exciting feature of our new tokenomics is having the ability to let shelters and animal charities receive passive income from our trading volume. In addition, users who solo-stake or add liquidity will receive a share of generated reflections whilst supporting their charity of choice.

Staking

BINGUS staking is not directly built into the contract. This allows significant flexibility for staking opportunities, letting Bingus Network keep up-to-date with the latest trends in BSC. BUSD rewards from the token taxation are sent to a contract address for stakers, this can be either a wallet to allow it to accrue, or to a smart contract for more creative mechanisms. For example, we will have a locked-staking income stream whereby you will be required to leave your BINGUS within staking for a minimum period of time to access the rewards.

At launch of Bingus Network, we will send BUSD rewards to those who provide Apeswap liquidity. **Afterwards, we will open up solo-staking opportunities and charity rewards.**

Passive income for charities

A new objective of Bingus Network is to offer the chance for animal shelters, rescues and charities to earn a passive income for a period of time.

Each month, a handful of charities shall be selected to earn BUSD from the staking rewards. Additionally, investors can solo-stake or LP stake their BINGUS and add weight to the charity of their choosing, they will then split additional staking with the charity of choice.

ANIMAL SHELTER

Bingus

Project & Charity Wallets

The funds generated by Bingus Network tokenomics are entirely in BUSD. This includes all funds that are sent to the Project wallet for marketing and other project related expenses, as well as the staking opportunities, and the charity wallets.

As BINGUS is purchased or sold over Apeswap, the percentage for each taxation system is sold back into BUSD and sent to the target contract address (staking, marketing, and charity). Note that for liquidity, only 50% of the taxed amount is sold for BNB and paired.

The charity wallet is in the sole control of Mike Cerisano and Bingus Finance LLC. The marketing funds are also in control of a select few very trusted (and privately doxxed to Mike) admins, for more fluidity and less dependency on Mike.

The charity wallet, naturally, is used exclusively for charitable giving. The marketing wallet has far greater flexibility. Take a read of the community section for how members can apply for funding their Bingus ideas.

Burn events

Manual burns are cause for an exciting event.

Once a month, a considerable portion of the BINGUS accrued from residual claims/disputes or from unpairing unnecessary liquidity shall be burned. This is the only burn mechanic in the Bingus Network to date; the burn will be considerable. We may also introduce other mechanics to reduce the supply of BINGUS through staking, for example, an early redemption fee for time-sensitive single staking, or game related purchases.

Manual burns are a live streamed event. During this event, there are different types of giveaways, where each winner gets some of the available burn pool.

The competitions for each giveaway are as follows with equal rewards for each winner.

1. Competition lottery using Gleam/Sweep widget
2. Meme competition that shall be the social media image chosen for the burn event
3. Community member of month by verified nomination, admin excluded.
4. Optional extra made available for the event that happens on stream if open/fair.

Guidelines for the burn event:

Ideas for the main event should be assigned to the community leaders. They should design the event with a team of community members. Though the event should take the following form.

- 10-mins Welcome chat with core team host
- 10-mins Updates from the Bingus Network
- 20-mins of community AMA questions (pre-submitted)
- Lottery giveaway winner randomly selected, transfer winnings on stream.
- Meme contest announcement (and tweet/insta sent with the image), transfer winnings to winner on stream.
- Community member of the month announcement, read out a few selected reasons, DM the winner on stream for BSC wallet/transfer if known.
- Celebrate the burn by starting the community event (tbd)
- This could be like a community video game with someone commentating
- An organized raid to a target streamer etc.
- Live twitch poll on a charity to donate to (giving block so can do in real time)

Success stories

Angels In Wheelchairs

Angels In Wheelchairs Project started in 2012 after 'Victoria' [pictured] lost both her rear legs in an accident and needed a wheelchair.

Without the money to buy one, the owner Celso decided to handcraft a dog wheelchair using the materials donated and plastic tubing.
The idea worked and soon he was taking requests from across the city, and then from all over Brazil.

Almost ten years later, more than 2,000 wheelchairs have been donated nationwide.

Details about donations and any stories from Twitter @bingus_network

Bingus

New Shelter for Angels In Wheelchairs

Almost at the same time as the wheelchair project, Celso decided to rescue and help other dogs in need. What started with Victoria is now the home of 36 dogs, most of them are sickly, old and carrying disabilities.
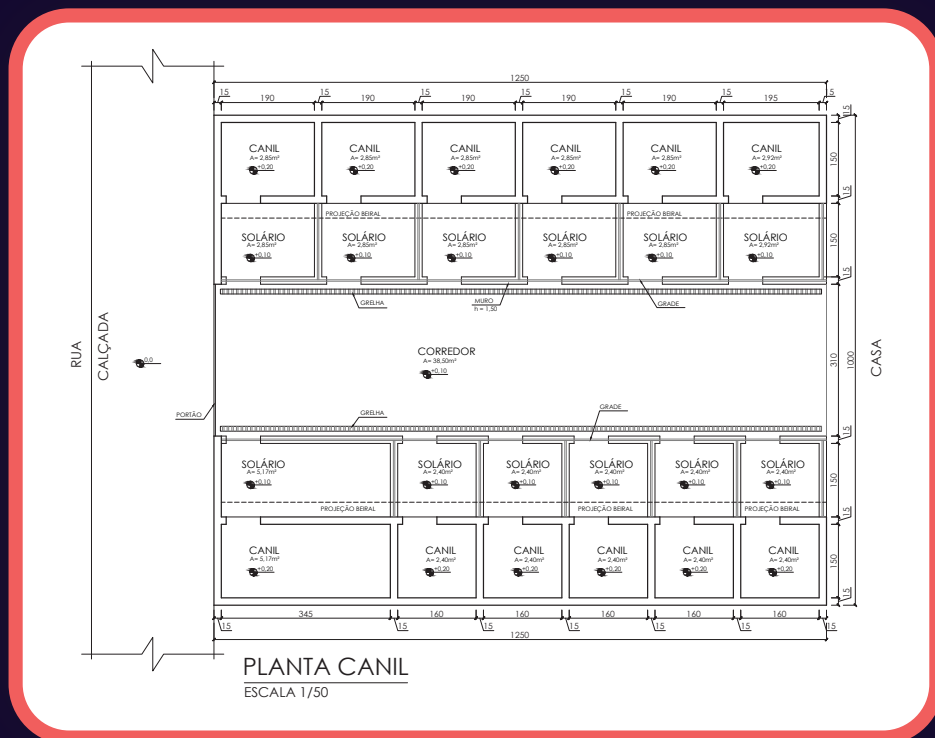

The shelter is placed on a rented house with really low quality infrastructure (floor isn't paved and becomes muddy when it rains and roof had leaks last year) and relies solely on donations to feed and treat the dogs and also to help on building maintenance.

With the Bingus Network donation, Angels in Wheelchairs will be able to make a full refurbishment of the shelter, giving top class housing for all the 36 dogs and more if needed.

The future is brighter because our next steps are to build a non-profit with full support for animals from the whole city as well as an adoption facility.

"It's a dream coming true and new doors have opened, all thanks to Bingus Network!"
- Celso Hommer Neto of Angels In Wheelchairs, São Paulo, Brazil

Blueprint of the new shelter design

Bingus Platform

We now assert Bingus Network as a utility token. Not only do we have opportunities for animal shelters and Bingus holders to earn a passive income from staking the Bingus Network token, we also are building a bespoke use-case application for animal shelters for data management.

We are actively developing Bingus Platform that will be a significant quality of life boost for animal shelters with the help of blockchain technology. Our application is an animal shelter registry for the management, storage and tracking of animals and their information.

It came to Bingus' attention that each animal shelter/rescue has their own bespoke method of storing the data of animals. The sophistication of these methods is entirely dependent on the technological skill of the volunteers. The alternatives are paid software to manage this, however, with money being sparse as it is for a not-for-profit shelter, this is a far from ideal option.

Continues on the next page

" We are actively developing Bingus Platform that will be a significant quality of life boost for animal shelters."

Bingus

In consultation with different animal shelters that have engaged with Bingus and received donations, we have observed a clear opportunity for our technologically savvy team to deliver a product, free of charge, easy to use and tailored for purpose.

We have on the Bingus Network team backend developers, frontend developers, database developers, expert UI/UX designers, as well as some keen and committed shelter representatives. Not to mention the support of a wonderful community.

Over the next few months, Bingus Network will develop a beta version of Bingus Platform and team up with our partner shelters to test it out. We will release Bingus Platform free of charge to all non-profits. It shall be paid upfront for many years and have open source code for all volunteer contributors to assist.

"Shelters and rescues have a very high turnover of animals entering and exiting their care, and are often managed by a large team of staff and volunteers that need to track the movement of each animal's unique journey. From intake information when they first arrive (perhaps as a stray, or surrendered by their owner), to medical history, behavioral notes, daily routines, up to date photos for online listings, and eventual adoption details, all of this information needs to be readily accessible to anyone on the team"

- Aaron of The Real Bark, LA, and consultant for Bingus Platform.

"We just rescued 5 street pups from Mexico, one of which had recently been hit by a car and was found bleeding out alone one the street. The others are puppies on heavy antibiotics, two had intense tic infestation on their ears.

Our Bingus fund is fully at work on all of these pups. Big thanks to you all"

Aaron from The Real Bark, Los Angeles

Twitter @bingus_network

Bingus Network Community

Bingus Network is a community token. The leadership are volunteers who rose through the ranks by helping Bingus grow. There are no employees at Bingus, every admin is an investor in the project who loves the project and helps the cause.

Community engagement is the pillar of a community token. Without it, the project relies too heavily on too few people. Luckily, we have a vast community of keen people and a dedicated team of mods and admins already. Fundamentally, anyone can rise to the leadership position in Bingus Network. It all starts by being active in the main chat group. The majority of the current admin team were not around at the launch of Bingus 2.0.

Consistent performance by community members is rewarded with privileges and recognition. Likewise, when a mod or admin is inactive, they should say so and step down. This recycling of privileges is critical for a healthy and active, growing community.

Community Hub

The Bingus Network Community Hub is a place for more serious ideas and more 'business-like' action. The main chat is mainly for fun and hanging out, the Community Hub, however, is where actions happen.

Bingus Network project ideas that are supported by the community will come into fruition with a new thread in the Community Hub. Each idea will have a project lead, this can be anyone from the community, ideally it would be the person who had the vision for the idea in the first place. Admins and moderators will be involved to oversee actions and make sure they are appropriate for Bingus Network's vision as well as to negotiate any funding that might be needed, though you will be largely free to operate independently.

"Community engagement is the pillar of a community token. Without it, the project relies too heavily on too few people."

The project lead should recruit keen Bingus community members to assist with the project. This type of action is what will gain recognition from the current administration. If demonstrating obvious commitment, you may be invited to become a moderator for Bingus Network, and gain access to the moderator chat. Consistent performance on projects and in the community among moderators will result in promotion to the administration. Administration give input on how the whole project is run.

In this ecosystem, new members have a transparent route to the top, should they desire. This passion should be harboured, encouraged and rewarded.

Structure

Telegram is still our main mode of contact. The journey for a new investor should be:

Landing page

This is a group that is frozen so no comments/contributions can be made, here, the user will find all the pinned fundamentals of Bingus (website, socials, how to buy, different language telegram groups).

Main Chat.

The main chat is where fun discussions and hype happen. In all the other groups that exist, fun/casual discussion should be taken to main..

The Community Hub

Users are encouraged to un-mute the Community Hub channel, as important projects and news shall be posted here. A new thread will be a rare event. It is also a reliable way for the team to send important messages to the community. Members can comment on the thread and have discussions specifically about the announcement.

Marketing/Shill Group

This is not invite only, however, electing to come here is electing to participate. Here, tasks will be brought by community task leaders for any project that aims to spread the word of Bingus Network. Organised raids and shilling actions take place here.

Community Mod and Admin Chat

Bingus Network moderators have their own chat to ask questions and get information so that they can advise people in the main chat. Likewise, the administrators have their own chat to discuss sensitive issues and participate in leadership decisions.

Bingus Network Roadmap

Pre Launch

- Smart contract complete
- Website update to Bingus Network
- Coinhunt Promo
- Bog Charts Ads
- Shilling Bot

- Claims portal created
- White paper release
- Coinsniper Promo
- Reddit posts
- **Launch**

Post launch

- Claims website activated for 2 months
- First LP staking rewards
- Dextools trending
- CoinGecko listing
- Coinmarketcap listing
- Claim disputes active for 2 months

- LP staking period delay for 1 hour
- First donation as Bingus Network
- Community organised shilling
- TrustWallet listing
- AMAs
- Application for Apsewap BUIDL

Ongoing objectives

- Community structure embraced
- Bingus: The Game
- Solo staking implemented
- Ongoing charitable promotions
- Beta testers of Bingus Platform
- Community competitions and ideas
- **Community driven initiatives**

- Neural Bingus NFTs
- Monthly schedule live events
- Charity passive income staking
- Version 1 of Bingus Platform
- Charity partnerships with other projects
- Bingus Platform feedback

Bingus

Disclaimer

This is the whitepaper for the Bingus Network, a BEP20 token on the Binance Smart Chain (BSC) using the ticker $BINGUS

BINGUS converts a percentage of each transaction into Binance United States Dollar stable coin (BUSD) for distribution to animal charities, shelters and rescues, as well as opportunities for investors to earn passively themselves.

The BUSD is in the sole control of Bingus Finance LLC, a registered company in New York State, owned and controlled by Mike Cerisano.

This whitepaper outlines the original Bingus concept, the history through to its evolution to Bingus Network, as well as all the specific features of Bingus Network and its intentions as a legitimate investment and cause for animal welfare.

Bingus Network is operated and run by a team of volunteers backed by a strong community of engaged investors.

This whitepaper was created by Jamie, Essy Dave and Mike Cerisano, with inputs from the wider Bingus Network administration team. Artwork was created by Blu, Cal Weir (calweir.com), and Plumb. The smart contract was developed by Lat_0x in consultation with Fuwafuwa Dokidoki and JohnTools. The claims portal and contract was built by Fuwafuwa Dokidoki. The website was built by Valdo and Archimedes Talon. This document was designed by BudgetChimp.

This is not financial advice.
